Appendix 2: Precautions for Replacing MR-J3 Series with MR-J4 Series

1. OUTLINE

This section describes the changes when the system is upgraded by replacing the MR-J3 series with the MR-J4 series. The functions and performance of the MR-J4 series are much higher than those of the MR-J3 series.

2. REPLACEMENT MODEL

This section describes the basic models for replacing the servo amplifier and servo motor as a set.

2.1.2 Comparison of Servo Amplifier Dimensions

■ Comparison of MR-J3 Series (Type A/B and T: DIO Command/Serial Communication Operation) and MR-J4 Series (Type A/B) (22 kW or Less in 200 V/100 V Class)

The following table shows the dimension comparisons between the MR-J3 series and MR-J4 series. The servo amplifiers of 3.5 kW or less, 7 kW, and 22 kW can be mounted interchangeably because they have the same dimensions. However, note the following: For the servo amplifiers of 5 kW, the width and clearance between mounting screws in the horizontal direction have been changed. For the servo amplifiers of 11 kW and 15 kW, the width, clearance between mounting screws in the vertical and horizontal directions, and screw size have been changed.

The servo amplifiers of 700 W to 3.5 kW, 7 kW, and 22 kW can be mounted interchangeably because they have the same dimensions. However, note the following: For the servo amplifiers of 600 W or less, the width and depth have been changed. For the servo amplifiers of 400 W or less, the depth has been increased. For the servo amplifiers of 5 kW, the width and clearance between mounting screws in the horizontal direction have been changed. For the servo amplifiers of 600 W or less, 11 kW, and 15 kW, the width, clearance between mounting screws in the vertical and horizontal directions, and screw size have been changed.
